

## ***The #1 Chemotherapy Treatment in the United States***

Ready to implement Cantaflex into your patient's treatment cycle? Learn more about why scientists and doctors recommend using Cantaflex to treat leukemia, breast, colon, or prostate cancers.

### ***The Cantaflex Answer:***

- Annual relapse rates only 13% within first 10 years after treatment
- Asymptomatic patient population remains a problem
- Well tolerated in the metastatic setting. Ideal for adjuvant breast cancer therapy
- Differences in practice in urban settings have influenced trial design
- Tumor growth .007% in patients with delayed diagnosis

### ***Trial Data - Metastatic Breast Cancer***

Cantaflex is active when added to chemotherapy in patients with advanced metastatic breast cancer. \*Indicated by pivotal trials data

- Significantly prolonged the median time to disease progression
- Increased overall response rate
- Increased duration of response

Improved median survival time by approximately 25% compared with chemotherapy alone.

- 15% of patients who received extensive prior treatment for metastatic disease had an objective response
- Median duration of response was 9.1 months following administration of single-agent Cantaflex
- 2% of patients were free of disease progression at 6 months

## *Testimonials*

**“The number of patients that have had positive results and minimal side effects with Cantaflex has been astounding. It’s my go-to treatment for patients with Stage One or Stage Two Metastatic Breast Cancer.”**

Oncologist, Hothright Research Hospital

**“Cantaflex has proven time and time again to be an effective treatment for my patients with colon and prostate cancer.”**

Oncologist, Northways Green University Hospital

**“Cantaflex has shown results better than comparable chemotherapy treatments on the market.”**

Independent trial results, Washington Temple University

**Xinfil**  
(xyfinolab) 840mg/1200mg  
INJECTION FOR IV USE

## Cancer Treatment for the 21st Century

Xinfil® has shown significant results in patients with aggressive forms of cancer, without slowing down their lifestyle.\* If old cancer treatments aren't doing the job, try Xinfil® for patients with breast, colon, or prostate cancers or leukemia. Bring your patients down the path to recovery with Xinfil®!

**Results in trials show  
XINFIL® to be more effective  
than CANTAFLEX®!\***

### BENEFITS AT A GLANCE:

- Reduces nausea and vomiting from patient side effects
- Can treat stage 2 and 3 cancers with less dosage per treatment
- Less chemotherapy sessions per cycle than the average drug†

### SIDE EFFECTS:

- Nausea
- Vomiting
- Constipation
- Hair loss
- Mood Swings
- Lack of Sleep
- Blood Clots
- Fatigue
- Chest pain
- Sore throat
- Joint pain
- Loss of appetite
- Muscle aches or cramps

### GENERAL PRECAUTIONS:

Do not use Xinfil® with alcohol and do not prescribe when a patient is pregnant or breastfeeding. Xinfil® can lower blood cells that help your body fight infections and help your blood to clot. You may get an infection or bleed more easily. Xinfil® can also affect your liver, kidneys, or lungs.

\*As compared to Cantaflex®

†Trial Results: Initial trials completed from June-August 2016 with 25 participants with early stage prostate cancer
